TRY this

Fill an ice cube tray with water and put the tray in your freezer.

Check the progress of your ice every 30 minutes.

WHAT’S GOING ON?

Water EXPANDS when it freezes, which means the ice is less dense & floats to the TOP.

Notice how the ice forms on the TOP of the cube first.

TRY this

Fill an ice cube tray with water and put the tray in your freezer.

Check the progress of your ice every 30 minutes.
