

Scan and measure the glaciers before they melt! We call on you and your team of scientists from the Center for Remote Sensing of Ice Sheets, to travel to the Arctic and to measure the ice caps. You will be given radars, satellites, and a remote control plane. Use them wisely. The plane can survive subzero temperatures and has a wing span of 26 feet. It is your mission to use these devices to save the world, remember CreSIS is with you...
